

Homework 1

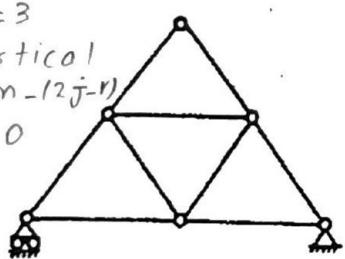

(Due: September 20, 2021)

Question 1: 10 points

Classify each of the structures as statically determinate, statically indeterminate, stable or unstable. For those cases that are indeterminate, specify the degree of indeterminacy.

$$m=9, j=6, r=3$$

Degree of statical indeterminacy = $m - (2j - r)$
 $= 9 - (2(6) - 3) = 0$
 statically determinate and stable

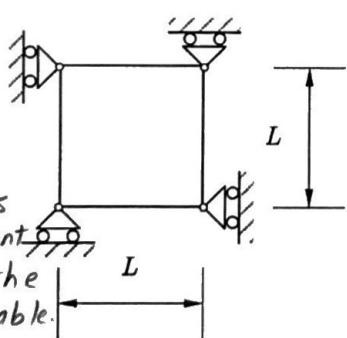

Figure 1:
②.5

$$m=4, r=4, j=4$$

$$m+r=2j=8$$

statically determinate

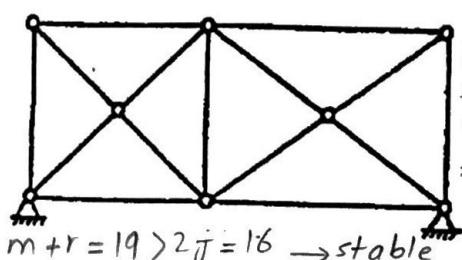

The reactions are not concurrent at a point, so the structure is stable.

Figure 3:
②.5

$$m=15, j=8, r=4$$

Degree of statical indeterminacy = $m - (2j - r)$
 $= 15 - (2(8) - 4) = 3$

$$m+r=19 > 2j=16 \rightarrow \text{stable}$$

Figure 2:
②.5

$$n=2 \text{ parts}$$

$$r=8 \text{ reactions}$$

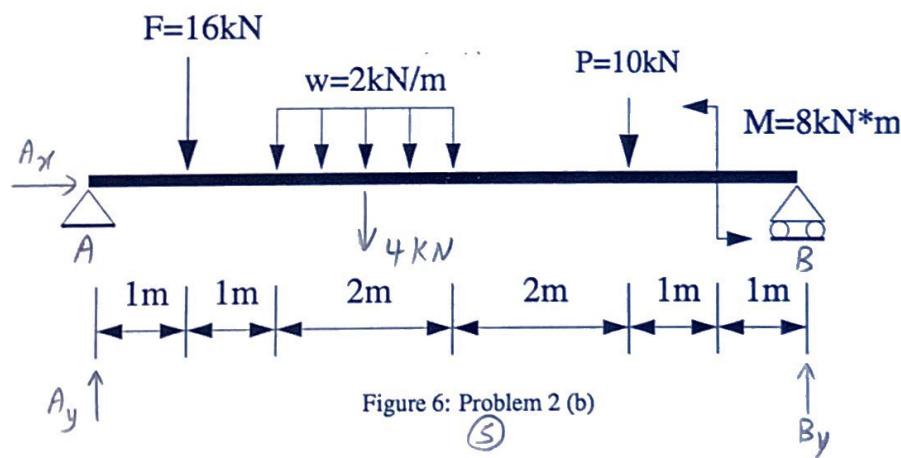

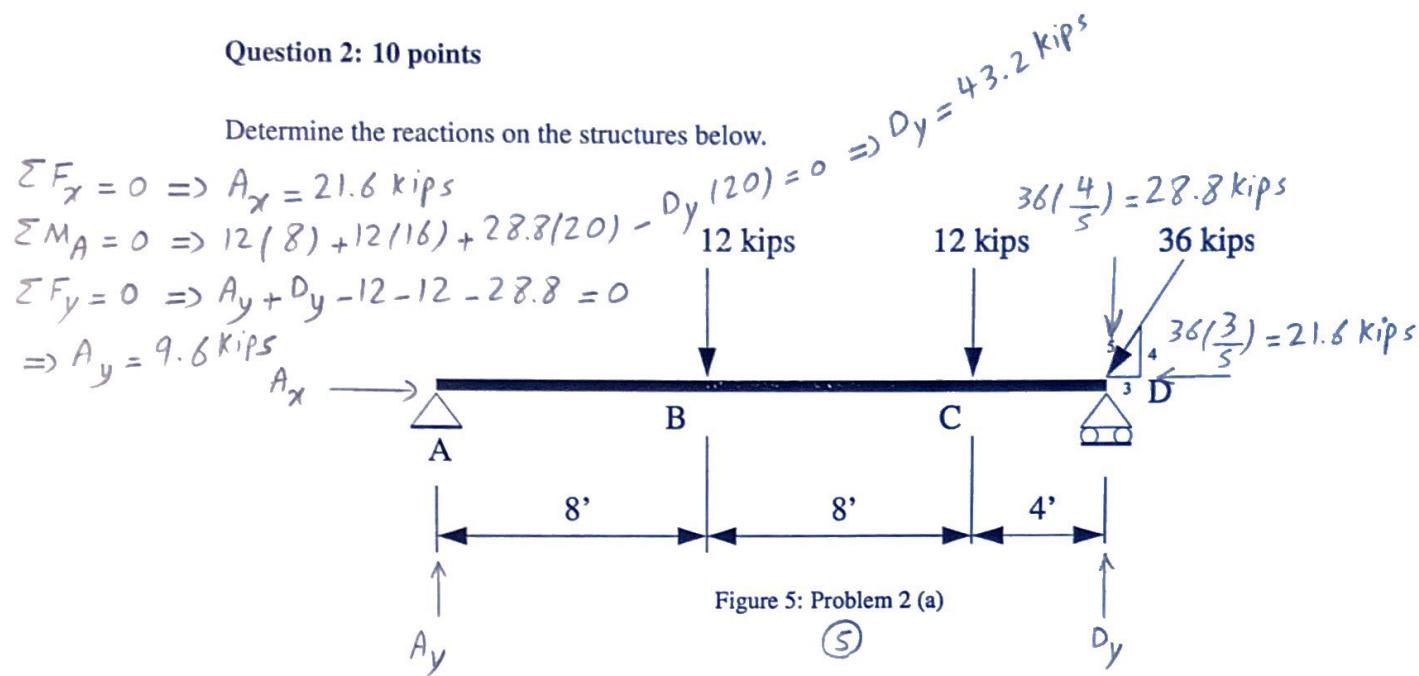

$$r-3n=2 \text{ degree of statical indeterminacy}$$

The reactions are nonconcurrent and nonparallel, so the structure is stable.

Figure 4:
②.5

Question 2: 10 points

Determine the reactions on the structures below.

$$\sum M_A = 0 \Rightarrow 16(1) + 4(3) + 10(16) - 8 - B_y(8) = 0 \Rightarrow B_y = 10 \text{ KN}$$

$$\sum F_y = 0 \Rightarrow A_y - 16 - 4 - 10 + 10 = 0 \Rightarrow A_y = 20 \text{ KN}$$

$$\sum F_x = 0 \Rightarrow A_x = 0$$
