Let \((\text{Gen}, H)\) be a collision-resistant hash function and let \(F\) be a PRF. For each of the following, state whether \(H\) is necessarily collision resistant. Justify your answer.

1. \(\hat{H}^s(x_1||x_2) = H^s(x_1 \oplus F_s(x_2))\)

2. \(\hat{H}^s(x_1||x_2) = H^s(H^s(x_1)||x_2)\)
