1. What is a side-channel attack?

2. What is a cache timing channel?

3. What is the Flush+Reload Technique?

4. What is exception handling?

5. What is out-of-order execution?

6. How can one check that out-of-order execution indeed occurred using the Flush+Reload technique?

7. How can one learn secret information by leveraging out-of-order execution and the Flush+Reload technique (as in the Meltdown attack)?
