## FOREWORD

The eight papers that constitute this report were presented as term papers by graduate students at Stanford University for the electrical engineering course EE 237, "Advanced Network Synthesis," Spring Quarter, 1967. The papers represent a continuation of the previous report, compiled under similar circumstances, "Papers on Integrated Circuit Synthesis," Stanford Electronics Laboratories, Technical Report No. 6560-4, June 1966.

The requirement for the course was to give a summary of a study in depth of some suitable topic in the field of integrated circuit synthesis; this to be done in less than 10 pages. New research results were not expected; however, as this compilation shows, some excellent new results, as well as some useful summaries, have been presented. Unfortunately, the funding situation has precluded publication of the remaining papers submitted.

Judging from the response to the previous compilation, it is felt that publication of these papers, which in a general way offer a compact survey of some present research topics, can be of help to those working in the area of integrated circuit synthesis. It should, however, be remembered that these are term papers and as such do not reflect the polished presentation required of more formal reports. A short preview of each paper is inserted for reader guidance.

The compilers are indebted to Mary Ellen Terry for her care in the final preparation and presentation; they wish to gratefully acknowledge their appreciation for her assistance on this rather difficult task.

## CONTENTS

	<u>Page</u>
I. INTEGRATED CIRCUITS--HIGH FREQUENCY EFFECTS AND LIMITATIONS (Larry L. Gilbert) . . . . .	1
A. Introduction . . . . .	2
B. Capacitors . . . . .	2
C. Resistors . . . . .	6
D. Transistors . . . . .	8
E. Summary . . . . .	12
References . . . . .	13
II. TUNABLE INTEGRATED CIRCUITS (Ray J. Black) . . . . .	15
A. Introduction . . . . .	16
B. Controllable Elements . . . . .	16
C. Variation of Resistance . . . . .	16
D. Variation of Capacitance . . . . .	19
E. Variation of Gain . . . . .	20
F. Second Order Filter Function . . . . .	22
Appendix . . . . .	30
References . . . . .	38
Bibliography . . . . .	38
III. RC SYNTHESIS USING NEGATIVE IMPEDANCE CONVERTERS (James D. Plummer) . . . . .	41
A. Introduction . . . . .	42
B. NIC Synthesis Procedures . . . . .	43
C. Horowitz Optimization Procedure . . . . .	46
D. NIC Realizations . . . . .	47
E. Sensitivity of NIC Circuits . . . . .	48
F. Practical Usefulness of NIC Circuits . . . . .	55
G. Conclusions . . . . .	59
Appendix	
A. Design of Lowpass Butterworth Filters . . . . .	61
1. The Second Order Filter . . . . .	61
2. The Fourth Order Filter . . . . .	63

3. The Sixth Order Filter . . . . .	64
B. Design of Bandpass Filters . . . . .	66
References . . . . .	69
<b>IV. POLE SENSITIVITY IN RC ACTIVE FILTERS</b>	
(Brooks B. Sheldon) . . . . .	71
A. Introduction . . . . .	72
B. Method I: Horowitz Procedure . . . . .	72
C. Method II: Herbst Procedure . . . . .	73
D. Method III: Hakim Procedure . . . . .	76
Appendix	
A. Case III . . . . .	87
B. Case IV . . . . .	88
References . . . . .	95
<b>V. A FLOATING, D.C. COUPLED, INTEGRATABLE GYRATOR</b>	
(A. Lubarsky, Jr.) . . . . .	97
A. Introduction . . . . .	98
B. Analysis Approach . . . . .	98
C. Test Results (Low Frequency) . . . . .	102
D. High Frequency Analysis . . . . .	103
E. Stability . . . . .	105
F. Discussion . . . . .	106
Appendix	
A. Relationships Between the Three Block Diagrams . . . . .	108
B. Gyrator Admittance Matrices . . . . .	117
C. High Frequency Admittance Parameters Determination . . . . .	118
D. Output Admittance . . . . .	120
E. Transfer Admittances (Forward) . . . . .	122
F. Inverse Transfer Admittances . . . . .	123
G. Stability . . . . .	123
References . . . . .	128

VI. A STUDY ON GYRATOR ANALYSIS - "THE NEWCOMB GYRATOR" (John A. Miller) . . . . .	129
A. Introduction . . . . .	130
B. Newcomb Gyrator Circuit . . . . .	131
1. Basic Design Considerations . . . . .	131
2. Computer-Aided Analysis . . . . .	134
C. Conclusions . . . . .	142
References . . . . .	143
VII. STATE-VARIABLE SYNTHESIS OF DISTRIBUTED RC NETWORK TRANSFER FUNCTIONS (E. B. Kozemchak) . . . . .	145
A. Introduction . . . . .	146
B. State-Variable Descriptions . . . . .	146
C. Extension of the Operational Simulations . . . . .	148
D. Distributed RC Network Synthesis . . . . .	151
E. The Approximation Problem . . . . .	158
F. Physical Embodiment of the Extended State-Variable Synthesis . . . . .	162
G. Sensitivity . . . . .	167
H. Examples . . . . .	170
I. Conclusions . . . . .	174
Appendix . . . . .	175
Bibliography . . . . .	179
VIII. P-N-P TRANSISTORS FOR INTEGRATED CIRCUITS (R. C. Dopher) . . . . .	181
A. Introduction . . . . .	182
B. Definition of the Problem . . . . .	182
C. Approaches to the Problem . . . . .	183
D. Theory of the Lateral Transistor . . . . .	185
1. Derivation of $\beta_0$ . . . . .	185
2. Application to Circular Geometry . . . . .	188
3. Frequency Response . . . . .	191
Appendix . . . . .	195
References . . . . .	201
